FORTY-NINTH ANNUAL REPORT

OF THE

BOARD OF SUPERINTENDENCE OF THE DUBLIN HOSPITALS,

WITH

APPENDICES FOR THE YEAR 1906-7.

TO HIS EXCELLENCY THE RIGHT HON. JOHN
CAMPBELL, EARL OF ABERDEEN, G.C.M.G.,
Lord Lieutenant General and General Governor of Ireland.

35, Dawson-street,
4th June, 1907.

MAY IT PLEASE YOUR EXCELLENCY:

We, the Board of Superintendence of the City of Dublin Hospitals, have the honour to submit to Your Excellency this our forty-ninth Annual Report under Statute 19 & 20 Vict, cap. 110, passed on the 29th July, 1856, entitled Dublin Hospitals Regulation Act.

During the year ending 31st March, 1907, we have inspected all the Hospitals which receive grants from Parliament.

These are:—

1. Westmorland Lock Hospital.
2. Steevens's Hospital.
3. Meath Hospital and County Dublin Infirmary.
4. Cork-street Fever Hospital.
5. The House of Industry Hospitals, viz.;
 - a. Hardwicke Fever Hospital.
 - b. Whitworth Medical Hospital.
 - c. Richmond Surgical Hospital.
6. Rotunda Lying-in Hospital.
7. Coombe Lying-in Hospital.
8. The Royal Victoria Eye and Ear Hospital; and
9. Royal Hospital for Incurables, which receives a portion of the Concordatum Fund.

On making these inspections we carefully observed and inquired into the state and condition of each institution to ascertain that the wards were clean and well ventilated, that every provision was made for the treatment, comfort, and welfare of the patients, and that the several buildings were kept in good repair and in a sanitary condition. We made inquiries respecting the current expenses of each hospital and the system of purchasing, storing, cooking, and issuing supplies; we looked into the nursing arrangements, and, in fact, into all such matters as might assist us in supervising these hospitals, and in reporting thereon in accordance with the provisions of the 18th section of the Act 19 and 20 Victoria, cap. 110.

In the appendix we set forth two sets of tables. One set tells of the work done, viz., the number and the nature of cases treated in each hospital during the year, the average number of beds occupied, the average time spent under treatment by each patient, the number of deaths. The other set has reference to the economic side of the question. Table No. 1 shows for each hospital its income and the sources thereof. No. 2 the average cost per bed for maintenance and for establishment and for both combined, but exclusive of buildings and furniture. No. 3 sets forth in detail the chief heads of expenditure. No. 4 the prices of each article supplied to each hospital per contractor or otherwise. No. 5 gives the various dietaries in use in each hospital. There is also appended a form giving the names of the governors of each hospital and the number of their attendances during the year.

A study of these tables, taken in conjunction with what we ourselves have observed, enables us to report that the hospitals under the superintendence of this Board fulfil in an economical and thorough way the objects for which they were instituted. In all we found evidence of advancement with the times in their equipment and their supply of modern appliances, while the reputation of the visiting professional staff—a reputation that stands high both in the general and medical world—leaves no room for doubt that all that science is now capable of doing to relieve suffering and cure disease is put at the disposal of the sick poor as fully as is possible under our straitened circumstances. It is unnecessary further to refer to well-known men. But there are in every hospital two officials whose work does not meet the public eye, and with whose efficiency we have been so much struck at our inspections that we make special mention of them to Your Excellency—the Matrons and the Registrars. We do not mention them in connection with each hospital, for comparison would be invidious, and there is not one of them of whom we cannot speak in terms of high praise.

The extent to which the work of a modern hospital rests on the matron can only be understood by those behind the scenes. Suffice it to say that as at our inspections we go our way from the basement, where the stores are examined and weighed in, stored and cooked, to the topmost ward where sick are treated, and on to the nurses' home, with what it reminds one of the judgment and

tact called for in the management and education of a number of girls launched into the world under new and trying conditions—in a word, wherever we go, we seem never to reach a place where the matron gets free from responsibility. In a regiment the adjutant and the quarter-master are looked upon as the busiest of men, but the matron of an hospital does the work of both these officers. As to the registrars we wish to say that we have invariably found them obliging and their books most carefully and accurately kept. Theirs is a department which in all scientific institutions is growing daily in extent and complexity.

As regards other matters, since in the general remarks of former reports we have brought to notice all that we found most striking, we refrain from repetition and proceed to make a separate report on each hospital.

THE LOCK HOSPITAL.

On inspection we found the wards and other parts of this institution thoroughly clean, well ventilated, and in excellent sanitary condition. The bedding and bed-clothes were in good condition, the floors were well scrubbed, regularity prevailed in every department, and the whole management impressed us as highly commendable. Each patient was questioned as to whether her comfort and well-being were satisfactorily attended to, and the answers without exception were in the affirmative. In the basement we were struck by the cleanliness of every corner—a condition difficult to bring about and maintain in a very old building. The method of cooking is good, and the different descriptions of food were all that they should be.

STEEVENS'S HOSPITAL.

This venerable building is kept in most admirable order, and knowing as we do how much difficulty there is in making an old house, as compared with a new one, presentable, we must say that its condition reflects the greatest credit on all concerned. Cleanliness and good repair are striking features, and everything gives evidence that in the management there is an expenditure not only of much work, but of much thought. In our last Report we noted that the Governors proposed providing a commodious apartment for the reception on first arrival of accident cases. We are glad to say that this has now been done, and that it is suitably furnished and arranged. Such accommodation should, we think, exist in every hospital. It is evidently most important that every accident should be most carefully examined immediately on admission. In old times bad accidents used to be taken direct to the operating theatre, but asepsis, so vitally necessary in connection with operations, forbids this being done. Therefore, cases of sudden injury must be undressed and undergo a primary examination elsewhere. In a room such as that now at use in this Hospital all that is required for the patient, whether he is to be taken home, to the wards, or to the operating theatre, can be conveniently and thoroughly carried out. As regards other

matters and the various departments, the favourable criticism of former Reports holds good. Suffice it to say, in conclusion, that in the nurses' refectory, the last room visited by us, we noted the following lines engrossed in a frame on the wall :—

“ Be kind, sweet maid, and let who will be clever;
Do noble things, not dream them, all day long;”

and that in remarking thereon to the matron we said that we had just had ample evidence not only that these lines had been taken to heart by the nurses, but also that cleverness to whomever it had been relegated had not been put outside the building.

THE MEATH HOSPITAL.

At our inspection we began with the accounts, which we found kept in an admirable fashion—and the same remark may be repeated wherever one goes in this grand old institution. At every turn we saw indications of enlightened progress and energy. We were thoroughly satisfied with the nursing, cooking, and sanitary arrangements. We were struck by the freshness of the wards and the comfort and contentment of the patients. The Nurses' Home referred to in our last Report is now completed, and will be shortly opened. It is admirably designed and constructed. Each nurse is given a cubicle of good size, well furnished, lighted, and ventilated. The partitions are of wood, and the authorities will, no doubt, see not only that every precaution is taken to prevent fire, but also that means to extinguish it, should it occur, are at hand. The brevity of our Report does not indicate that we did not visit every corner and satisfy ourselves as to the working of each department, but that we have nothing to amend in the encomiums bestowed in previous Reports.

CORK-STREET FEVER HOSPITAL.

If it may be said of all hospitals that they should receive support from the public purse, not only from a philanthropic but especially from an economic point of view, it may be repeated with double force of fever hospitals. The accommodation in them should in amount be such that no one need be refused admission, and in kind so satisfactory that no sensible infected person would hesitate in asking to be received. These conditions are fulfilled by the institution under consideration. The rule of the hospital is that any person being poor and suffering from fever who applies at the gate between 8.0 a.m. and 12.0 p.m. shall be admitted, unless all beds are full. The authorities never refuse a case of fever from the city, and also take in a great number from outside the city. The ambulance is sent on receipt of a doctor's certificate, telegram, or telephone, up to ten miles or thereabouts. A nurse always accompanies the ambulance, and she carries stimulants, &c., in an emergency bag, and leaves at the house a printed notice how to make inquiries about

the patient, &c., &c.: That patients when admitted are comfortably and efficiently treated our inspection fully bore out. In our last Report we drew attention to the bad colour of the clothes that had been washed in the laundry, due, it was said, to the colour of the water of the Poddle River. We were, therefore, glad to learn that the Corporation have cleaned the river, and that the hospital authorities have accepted estimates for a large storage tank, which will do away altogether with the use of Poddle River water in this institution.

THE HOUSE OF INDUSTRY HOSPITALS.

Under this heading are comprised the Hardwicke, Whitworth and Richmond Hospitals. The Hardwicke and Whitworth divisions, the former of which is for infectious cases only, are under the Medical Staff, while the Richmond is purely a Surgical Hospital. Two of the Visiting Staff, whom we happened to meet in the Hall at the time of our visit, were kind enough to join with the Lady Superintendent in showing us around. Our inspection was very exhaustive, and at every turn we were most favourably impressed by what was being done. Of course the contrast between the new buildings on the surgical side and the old ones on the medical side, strikes one. But, as at Steevens's Hospital, one could not help remarking how well old wards can be made to look when they are properly kept. Undoubtedly the one thing wanted by Dublin hospitals is money—money for buildings, money for new appliances, money to keep them, in a scientific point of view, up with the times, or, rather, a bit in front of the times—the proper place for Irish ability. This thought was in our minds as we inspected the well-equipped bacteriological laboratory, on which the Governors have with wisdom laid out a good deal of money. How much has been done! How much remains to do! We make these remarks in connection with this institution, for it seems to be the best equipped and to do the most bacteriological work of those under the superintendence of this Board. In no department of medicine have such strides been made as in the bacteriological. It is, therefore, incumbent on all connected with clinical hospitals to see to it that in these institutions pathology is alive, to foster the change which occurred in that science when it arose from the table in the *post-mortem* room and walked upstairs to the laboratory. It is now a science which deals not only with morbid anatomy, not only with the organisms and all the changes in the constituents of the blood and tissues that cause disease, but one which has also seated itself in the chair of the therapist, giving us serums that influence the reactions of the body towards disease, and, in a word, altering the outlook of medicine. This being so, it is plain that the proper up-keep of the laboratory of the future is a matter of great economic importance. It is a place which must be fitted out with appliances more or less costly, which requires for its proper working an expert bacteriologist with trained assistants, and which at the same time does so much, promises so much, and is becoming so

absolutely an essential part of the medical machine, that there can be no question of doing without it. Money, more and more money, must be provided by the public for our hospitals owing to the ever-growing demands made upon them under this head. It is plain that our students must be equipped, not only with what knowledge there now is, but that they must also be so grounded in the principles of science as to be able hereafter to keep themselves *au courant* with all progress. That such expenditure will prove an economic outlay there cannot be a shadow of doubt. Let each one calculate the value to himself as an individual of his own health, and the value to him and to the nation at large of the health of each member of the community under such headings as increased energy, efficiency, pleasure, and the paltriness of our present expenditure on public health will be to him as much a subject for amazement as it will, surely be for future generations.

THE ROTUNDA LYING-IN HOSPITAL.

On inspection we found this hospital in excellent order. Every department showed that in the administration a knowledge of science and of home comfort and of economy are combined. The wards were bright, and scrupulously clean and well ventilated. The supply of linen is ample, and each patient is as regards toilet arrangements as independent as if she were living by herself in a fully furnished room. The gain of this in preventing the spread of infectious disease is manifest. The teaching of students and nurses is carried out after the most advanced and simple way. It is a mistake to think that in good nursing there is anything complex. The reverse is the case. In this institution and in the Coombe Lying-in Hospital students and nurses are taught a system that can be put in force with the best results in the poorest cottage in the West.

THE COOMBE LYING-IN HOSPITAL.

We went over this Hospital with great pleasure, and in company with the Master, who, in conjunction with his Board, has carried out most beneficent changes during his period of office. Standing as it does in the poorest district in Dublin, it ministers in a most admirable way to a great want. Its blessings reach alike those who wish to be confined in their own homes and those who seek admission to hospital. It may not be in the knowledge of your Excellency how world-wide is the fame of the Dublin lying-in hospitals. We, therefore, beg to bring to your notice that in a well-known American guide to medical men visiting Europe for the purpose of study Dublin is set down as the one place in which to learn midwifery. All that we said as regards nursing, sanitation, methods of teaching, &c., when reporting on the Rotunda Hospital applies equally to this institution.

THE ROYAL VICTORIA EYE AND EAR HOSPITAL.

This institution is an instance of how much can be done by the amalgamation of hospitals. It is in every respect up-to-date, and when complete will compare favourably with any existing institution of a like kind in any country. The building is new, the appliances modern, and the way in which it is conducted reflects high credit on all concerned. We inspected every corner of it and saw nothing with which to find fault. To put down here what we admired would be to repeat our former reports.

THE ROYAL HOSPITAL FOR INCURABLES.

There is nothing but good to be said of this institution. Strange to say, as we went round it our feelings were not those of depression but rather of that joyful thankfulness which arises when one sees a most difficult situation being dealt with in the best possible way. To anyone who has not visited this home of all that is most dreadful in a corporal sense, it will be news that the feeling just referred to, pervades the patients. During a very thorough inspection we were most favourably impressed by everything we saw, but by nothing more than by the cheerfulness of everyone we came across. The accommodation is so arranged that practically every patient has a cubicle to him or herself, but not many were occupied at the hour of our visit. It seems to be the wise tendency of the authorities to encourage everyone who can to be up and about, associating with his fellows. Such bad cases as we saw were being looked to most carefully by nurses, and they and the doctors must do their work well, for we did not meet with one patient whose sufferings arrested our attention. To refer to all that is done for the recreation of the inmates (indoor and out), would exceed the limits of a report such as this. The only suggestion we would venture to make for the consideration of the Governors is whether it would not be better to have the dressings soiled by the sick burned on the premises rather than sent away in covered vessels as they now are, to be destroyed at the works of the Pembroke Township.

We have the honour to be

Your Excellency's obedient, faithful servants,

FRANCIS W. BRADY, BART., *Chairman.*

ROYAL VICTORIA EYE AND EAR HOSPITAL.

Breakfast.	Dinner.	Supper.
Bread and Butter, 8 oz.	On Sunday and Wednesday—Roast mutton, with vegetables (turnips or cabbage), and potatoes.	Bread and butter.
Tea, with Milk and Sugar, 1 pint.	On Monday and Saturday—Roast beef or stewed beef occasionally with soup, vegetables, and potatoes.	Tea, with milk and sugar.
	On Tuesday—Boiled bacon and cab- bage and potatoes.	
	On Thursday—Roast beef, with potatoes and turnips.	
	On Friday—Fish and potatoes.	
	Bread each day as required; many of the patients do not care to take any.	

Breakfast at 8 o'clock, A.M.; dinner at 1.30 o'clock, P.M.; supper at 8.30 o'clock, P.M.

Eggs and extra Milk, Beef Tea, &c., supplied when necessary, if the patient is debilitated or too old or too young for the ordinary diet.

The system of preparing a set diet for each patient was abandoned some years ago, as was found to result in a good deal of waste. Now each patient gets as much as he or she cares to eat, and there is practically no waste at meals.

Members of House Committees.

No. 17876.

DUBLIN CASTLE,

8th August, 1907.

Sir,

I have to acknowledge the receipt of your letter of the 5th instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Forty-ninth Annual Report of the Board of Superintendence of the Dublin Hospitals, with Appendices, for the year 1906-1907.

I am,

Sir,

Your obedient Servant,

J. B. DOUGHERTY.

The Secretary,
Board of Superintendence of
Dublin Hospitals,
85, Dawson-street,
Dublin.
